Subject: Update on 2 things

Just wanted to update you on a couple of things we discussed last week:

- 1) Jen LaPoma and Eugenia Naranjo confirmed that they did not have to ask for permits from NJDEP for the sediment core sampling they did on 17-mile and Newark Bay, respectively. Eugenia said that Tierra notified Coast Guard, NJDEP, USFWS and USACE of the work (USACE probably because Newark Bay is part of the Harbor Deepening program).

- 2) Karen Greene of NOAA's National Marine Fisheries Service (NMFS) agreed that meeting about fish windows and sampling would be good. She suggested including NJDEP Fisheries and USACE-NY staff who were involved in the Harbor Deepening sampling to define fish windows in Newark Bay, and will be sending me their contact info. I'll forward likely meeting dates once I hear back from them – it won't be until after April 16 based on Karen's schedule.
